

FINALLY BREATHE!

Make an additional contribution to lowering the risk of infection

VIRUS-FREE AIR
FOR YOUR BUSINESS

SILENTCARE

Customers' fears of COVID-19 can be both a threat and an opportunity for a company. Ensure virus-free air and meet current customer demands.

Since the COVID-19 outbreak, this can no longer be taken for granted. Rather, there is a general concern about getting infected while shopping. **Make a difference and offer your customers and employees in-store clean and healthy air.**

CLEAN AIR ON EVERYONE'S LIPS

Healthy food, plenty of exercise, but also clean air free of viruses, bacteria and other pollutants are essential for our health. Particularly in rooms with a high number of people, the number of airborne pollutants increases rapidly and thus increases the risk of infection with pathogens. The SilentCare is the perfect solution, especially for rooms where the supply of fresh air cannot be guaranteed to the optimum degree. The H14 filter safely removes airborne germs from the room air.

With an output of 600 m³/h at < 43 dB(A), the SilentCare is also very quiet. You will almost not hear the SilentCare, as it is significantly quieter than the usual ambient noise: traffic noise 55-65 dB(A), background noise in an office 50-60 dB(A).

Guaranteed protection thanks to HEPA filter medium with class H14

The three-layer filter medium, certified according to the European standard EN1822, ensures efficient filtration of almost all aerosols present in the ambient air. This reduces airborne pollutants to a minimum.

“

Eliminates at least
99,995 % of airborne
pollutants.

Advantages, that convince

- Extremely quiet (<43 dB(A)) and draught-free operation due to 360° discharge at 600 Bm³/h
- Fast and effective removal of airborne pollutants such as viruses, bacteria, pollen and aerosols through H14 filter
- Compact design with casters for mobile use
- With 900 Bm³/h, the "boost function" enables a higher circulation rate and supports shock ventilation.
