

CHILD'S LAUGHTER

A PIECE OF NORMALITY IN CORONA TIMES

CLEAN AIR FOR
OUR CHILDREN

SILENTCARE

Children suffer particularly from the corona crisis, as familiar social contacts are almost no longer possible. Playing and romping with friends - unthinkable. School closures and contact restrictions affect the psyche of many children.

It is all the more important that we create a piece of normality for our children. Hopping, jumping, climbing and dashing should be possible again without restrictions.

Effective room air filtration helps by reducing the risk of infection to a minimum. For a high level of safety!

CLEAN AIR ON EVERYONE'S LIPS

Healthy food, plenty of exercise, but also clean air free of viruses, bacteria and other pollutants significantly promote our health. Especially in rooms with a high number of people, the number of airborne pollutants increases quickly and thus increases the risk of infection with pathogens. The SilentCare is the perfect solution, especially for rooms where the supply of fresh air cannot be guaranteed to an optimal degree.

The H14 filter safely removes airborne germs from the room air. With an output of 600 m³/h < 43 dB(A), the SilentCare is also very quiet.

Guaranteed protection thanks to HEPA filter medium with class H14

The three-layer filter medium, certified according to the European standard EN1822, ensures efficient filtration of almost all aerosols present in the ambient air. This reduces airborne pollutants to a minimum.

“

Eliminates at least 99,995 % of airborne pollutants.

Advantages, that convince

- Extremely quiet (<43 dB(A)) and draught-free operation due to 360° discharge at 600 Bm³/h
- Fast and effective removal of airborne pollutants such as viruses, bacteria, pollen and aerosols through H14 filter
- Compact design with casters for mobile use
- With 900 Bm³/h, the "boost function" enables a higher circulation rate and supports shock ventilation.
