

The new backflushing filter AF 122

The AF 122 backflushing filter from Filtration Group Industrial is a specially designed filtration solution for applications with non-water-miscible and water-miscible cooling lubricants. The compact automatic filter system is equipped with an automatic, highly efficient segment cleaning system. The automatic filter can be ideally adapted to the conditions on site.

Simple, automatic, low cost

The central point of the development was to design a filter that would lead to long-term cost savings for the customer and still deliver high-quality results in line with the application. The new AF 122 series from Filtration Group Industrial is not only an ecological gain, but also an economic one.

Coming soon - The FG AF 122

Focusing on the essentials

In the medium term, the new high-performance filter system pays for itself by extending the service life of tools, pumps, systems and machines. The investment in the new AF 122 backflushing filter series from Filtration Group Industrial is therefore forward-looking and economical in every respect. In the end, everyone benefits: the employees, the environment and the company.

Intelligent construction & compact design

- minimal space requirement
- filter concept „flow from below“ ensures easy process integration
- mounting holes for easy installation
- low maintenance due to reduced number of components
- minimized error potential and less time required during maintenance due to consistent use of common parts

We inspire our customers and offer in concrete terms

- an application-oriented filter series
- compact design
- applicable up to a dirt of 200 mg/l
- low life-cycle costs, since no consumption of filter material
- highly efficient cleaning due to segmented filter element with high backflushing pulse without filtration interruption

More information about the AF 122 will follow soon!
