

COOPERATION IN TRADE

Successful cooperation with Europe's largest supplier

FILCOM GmbH has been successfully cooperating for many years with Rubix, Europe's leading supplier of industrial maintenance, repair and overhaul products as well as technical services. Rubix is present in 22 European countries and supplies its customers with the complete range of industrial needs. Punctual delivery is a top priority. A goal that FILCOM GmbH also pursues in the area of aftermarket bilge water deoiling.

Successful by tradition

Rubix's roots in Germany go back more than 100 years. In 1923, Zitzlsperger Landtechnik was founded in Deggendorf, which later acted as a technical dealer and from 1998 appeared on the market as ZITEC Industrietechnik. Under the umbrella of the French IPH, the ZITEC Group, founded in 2012, grew steadily. After a change of investors, the company was renamed Rubix GmbH in 2019.

PARTNERSHIP HAS GREAT SIGNIFICANCE

Partnership means responsibility. FILCOM GmbH lives this thought just like its customer Rubix. Working with Rubix means more than just being supplied with the right goods at the right time. Rubix supports its customers in reducing costs, optimizing processes and becoming even more successful. A guiding principle that FILCOM GmbH also follows.

Strong cooperation. Since 01 January 2022, FILCOM GmbH has been an authorized cooperation partner for the bilge water deoiling sector for Filtration Group GmbH, based in Hamburg. In addition to original spare parts for FG bilge water deoilers, the FILCOM GmbH portfolio also includes filtration and separation solutions for marine applications as well as the complete marine operating technology. A sophisticated logistics concept ensures a safe, efficient and fast supply of spare parts. The cooperation stands for the perfect interplay of expertise, commitment and inventiveness.

What can we do for you?

This is the question our customer Rubix deals with in its daily work. As a problem solver with intelligent service tools for automated ordering processes, flexible logistics solutions and maintenance services, Rubix works with its customers to develop modern and effective solutions.

ALSO A FILCOM MISSION

Making sure everything runs the way you, the customer want it to: The sustained availability and efficiency of deoiling systems is key to high plant productivity and performance. The FILCOM GmbH spare parts product portfolio includes original parts from the manufacturer as well as a sophisticated logistics concept for a safe, efficient and fast spare parts supply.

Our filter elements for replacement requirements are manufactured according to the same strict quality criteria as for original equipment. The result: **more safety, more efficiency and more performance for you.**

Rubix GmbH supplied a wide variety of spare parts to a customer that operates facilities in the field of oil removal. De-oilers are important guarantors of trouble-free operation in shipping, on offshore platforms and in industry. Deoilers separate oil, drive and hydraulic fluids from cooling, condensing and seawater. Using the innovative coalescer process, the systems exploit the different physical behavior of the fluids and thus manage without moving parts or additional chemicals. This increases service life and reduces the need for maintenance.

A fine thing for maritime environmental protection

Original manufacturer spare parts for use in efficient Filtration Group Separation systems for bilge water deoiling in shipping as well as on offshore platforms are an important guarantee for maritime environmental protection.

Bilge water is generated by leakages, condensation and various cleaning processes.

FILCOM GmbH is the specialist for high-performance original spare parts of FG bilge water deoilers in shipping. Especially when it comes to economic efficiency and environmental protection, the demands of the shipping industry are increasing. Therefore, trust in the high quality standards of FILCOM GmbH and benefit from the extensive stock of coalescers and spare parts for bilge water deoilers worldwide.

We offer the following spare parts for bilge water separators:

* SERVICE KITS

* FILTER ELEMENTS

- coalescer elements
- emulsion breakers
- Filter Coalescer
- Filter Cartridges
- Desiccant cartridges
- Filter GWTB
(Water Grade Meltblown Polypropylene)

* SPARE PARTS
